About ICoRSE 2025

The International Conference on Reliable Systems Engineering (ICoRSE) is a scientific event that unites researchers, academics, and industry professionals from all around the world to exchange innovative ideas and practical experiences.

Organized by the National Institute of Research and Development in Mechatronics and Measurement Technique in Romania, along with other national and foreign partners, this conference is a key opportunity for fostering collaboration and knowledge-sharing in reliable systems engineering, cyber-physical systems, mechatronics, applied mechanics, and in several related fields.

ICoRSE aims to advance scientific research and technological progress by promoting interaction between experts from academia, research institutions, and industry. Participants have the opportunity to present research findings, discuss technological developments, and explore practical applications, while building valuable connections for future collaborations. Through its focus on best practices and emerging technologies, ICoRSE contributes to the growth of reliable systems engineering and associated disciplines, establishing itself as an essential event for those engaged in advancing engineering and technology.

In 2025, the International Conference on Reliable Systems Engineering will take place on the 4th and the 5th of September.
